

KARMANA

INVESTOR PITCH · 2026

Karmana

Breathe. Rest. Grow.

The AI-powered wellness companion rooted in 5,000 years of Indian yogic wisdom – pranayama, meditation, and the Bhagavad Gita, personalized to how you feel *today*.

AI Companion

Pranayama

Mood-Driven

Sleep

Gita Wisdom

Relationship Guru

THE PROBLEM

Wellness apps are generic. Stress is personal.

One-size-fits-all content

Headspace and Calm serve the same library to everyone. Your Tuesday after a sleepless night looks identical to your best Sunday morning.

No real companion

Existing apps are content players, not coaches. When you're anxious at 2 AM, a playlist doesn't talk back. There's no one to guide you through it.

Western lens on Eastern practice

Meditation apps strip out the source – pranayama, mantra, and Vedic philosophy – and repackage a diluted version. Authenticity is the gap.

970 million people worldwide live with a mental health condition – and the #1 reason people abandon wellness apps is that the content doesn't fit how they actually feel.

THE SOLUTION

A wellness app that listens first, then guides.

1 • Morning Reflection

Every day starts with a 20-second check-in: mood (8 states), energy, and sleep quality. This becomes the signal that drives everything else.

2 • Mood-Rule Engine

A smart recommendation engine maps your state to a personalized morning → afternoon → evening routine. Poor sleep + low energy? It escalates to stress-relief protocols automatically.

3 • AI Companion – 5 personalities

Pranayama Guru for breath work · **Gita Companion** for life wisdom · **Sleep Guide** for wind-down · **Confidence Coach** for self-doubt · **Relationship Guru** for love, family & connection. Voice in, voice out – a real conversation.

4 • Authentic content library

Guided breathing (4-7-8, Box, Alternate Nostril), meditations, Himalayan & temple soundscapes, mantras, and a TikTok-style reels feed of wisdom – built to make ancient practice a daily habit.

PRODUCT

Features – live in the app today

Breathing Sessions

Anxiety Reset, Deep Breathing, Energize, Focus & Clarity – with animated visual guides. 4-8 min each.

AI Companion

5 modes including the Relationship Guru – guidance on love, family, and connection through a yogic lens. Voice input (Whisper) + text-to-speech. Cites its sources when quoting the Gita.

Soundscapes

Rain Collection, Nature, Color Noise, and an Indian Spiritual library: Tanpura, Singing Bowls, OM Drone, Ganga River, Hanuman Chalisa.

Sleep & Rest

Mood-adaptive wind-down screen, Night Wisdom, and sleep-focused soundscape recommendations.

Reels Feed

Short-form vertical feed mixing wisdom quotes and calming video – habit-forming discovery, wellness-native.

Streaks & Progress

Daily streaks with celebrations, 7-day activity charts, progress rings – retention mechanics built in.

Built on React Native + Expo, Spring Boot + PostgreSQL on AWS, Claude-powered AI. **Offline-first** – works on poor connectivity, critical for emerging markets.

KARMANA

UNIQUE SELLING POINT

The only wellness app where AI meets authentic yogic tradition

Personalization competitors can't match

Calm and Headspace were built pre-AI: static libraries, manual browsing. Karmana was born AI-native – every session is chosen for your mood, energy, and sleep *that day*. Retrofitting this onto a 10-year-old content catalog is hard. Building on it from day one is our moat.

A companion, not a catalog

Users don't search for content – they talk to a guru. Voice-first AI conversation with distinct personalities creates an emotional bond no playlist can. This is the difference between a tool and a relationship.

Authentic Indian wellness heritage

Pranayama, mantra, Gita philosophy, Himalayan soundscapes – from the source, not sanitized. This resonates with 1.4B Indians, the global diaspora, and a Western audience increasingly seeking authenticity over corporate mindfulness.

Whole-person loop

Check-in → recommendation → practice → streak → reflection. A closed feedback loop that gets smarter with every day of use – data flywheel from day one.

COMPETITION

The incumbents proved the market. We'll take the next decade.

	Calm	Headspace	Karmana
Valuation	~\$2.2B (2019 round)	~\$3B (Headspace Health, 2021 Ginger merger)	Seed stage – ground floor
Annual revenue	~\$300M+ est.	~\$150-200M est.	Path to \$10M ARR (see next slide)
Personalization	Static library	Static library + basic quiz	Daily mood-driven AI engine
AI companion	None (content player)	Ebb (basic chatbot, bolted on)	5-mode voice AI incl. Relationship Guru, core of product
Authenticity	Celebrity narrators	Corporate mindfulness	Pranayama, Gita, mantra – the source
Price	\$69.99/yr	\$69.99/yr	\$10/mo · \$100/yr

Both built billion-dollar businesses on *static content*. Neither is AI-native.

Both are private – figures are best public estimates.

BUSINESS MODEL

Simple subscription. Serious numbers.

\$10

per month

Full access: AI companion, all sessions, soundscapes, sleep content.

\$100

per year

2 months free – drives annual commitment and lowers churn.

\$10M+

ARR at 100,000 subscribers

100K paying users × ~\$100-120/yr blended. Calm has 4M+ paying subscribers – 100K is 2.5% of that.

- ♦ **Freemium funnel:** reels feed + limited sessions free → AI companion and full library behind the paywall.
- ♦ **Near-zero marginal cost:** content is digital, AI inference cost per user is cents against a \$10/mo price.
- ♦ **Expansion later:** B2B corporate wellness (where Headspace makes much of its revenue), family plans, India-priced tier for volume.

You watched Calm and Headspace happen. Don't watch the AI wave from the sidelines too.

\$5.6T

Global wellness economy

Per the Global Wellness Institute – bigger than the pharma industry, and growing.

\$180B+

Mental wellness segment

The fastest-growing slice, with meditation apps alone a multi-billion-dollar category growing double digits yearly.

\$5B+

Created by just two apps

Calm (~\$2.2B) + Headspace (~\$3B) – built on the *mobile* wave with static audio files and a subscription.

- ♦ **The pattern repeats.** Mobile made Calm and Headspace. AI is a bigger platform shift – and the wellness category's AI-native winner hasn't been crowned yet.
- ♦ **Incumbents are structurally slow.** Their value is locked in recorded content libraries; AI personalization cannibalizes their own catalog. Classic innovator's dilemma.
- ♦ **The product already exists.** This is not a deck and a dream – the app is built: AI companion, recommendation engine, content library, AWS infrastructure, live on device today.
- ♦ **Early investors in Calm turned millions into a \$2B+ outcome.** The question isn't whether an AI-native wellness company gets big – it's which one you're in.
